# Lorraine Université d'Excellence: engineering of the 21<sup>ST</sup> century

**Lorraine Université d'Excellence** is an initiative of the Lorrain Research Site which subscribes to the dynamics of knowledge creation, the transfer of knowledge and innovation, and active participation in the economic development of the area. This initiative seeks to respond to the major points of transition in our world: materials, energy, ecological transitions, digital and health and humanity's place in this constantly-changing society.

For various exchanges, information regarding upcoming innovations and help in deciphering the challenges and new developments in engineering, the Lorraine Research Site is at your disposal at the following email address, dedicated to you:

**[lue-media-research@univ-lorraine.fr](mailto:lue-media-research@univ-lorraine.fr)**

New projects, new solutions...all of these advances are the results of the global, interdisciplinary work of the entire academic and scientific community which makes up the Lorraine Research Site. This includes: Université de Lorraine, CNRS, INRAE, Inria, INSERM, the CHRU de Nancy, AgroParisTech Nancy, and Georgia Tech-Europe. These advances are also the results of partnerships with different players in the socio-economic space, various companies and other large groups at the local, national and international levels.

Confirmed to I-SITE (Initiative-Science-Innovation-Territories-Economy) status by an international jury in June of 2021, the Lorraine Research Site wishes, alongside all of its partners, to inform you regularly regarding its projects, their results and their concrete effects on the lives of individuals.

Across various scientific subjects, the Lorraine Research Site works within the best universities across the world and has developed a recognized expertise regarding relevant technologies. Its objective: to share its expertise across the region, to make itself known within its French, European and International ecosystem, to enlighten others regarding complex issues, various sciences and technologies and to respond to the societal obstacles of the day.

### **A dedicated media and press service is at your disposal.**

Starting in spring, the Lorraine Research Site will propose a half-hour webinar program on the subject of decrypting one of the major transitions. Researchers will present the original ways in which they approached these transitions, and the innovative results they obtained.

## **Discover the scientific expertise of Lorraine**

Plug In Labs Lorraine is a free portal, accessible to all, which presents the offers of laboratories and research centers of the Lorraine Site on the subject of innovation, scientific and technical skills, equipment, technologies and patents, and engineering.
